Where,

Surrender value of the vested bonuses, if any, is also added to this GSV. Surrender value of bonus is calculated by multiplying the vested bonus with the bonus surrender value factors.

For single premium policies, the policy can be surrendered any time during the policy term.

For surrender during first three policy years GSV will be 75% of total Premiums paid plus surrender value of the vested bonuses. The surrender value of the vested bonuses is calculated by multiplying the vested bonuses with surrender value factors.

From fourth policy year onwards GSV will be 90% of total Premiums paid plus surrender value of the vested bonuses.

The Non-Guaranteed SSV will be based on an assessment of the asset share progression at different durations of the policy. This assessment would be based on past financial and demographic experience of the product / group of similar products and likely future experience and will be reviewed from time to time depending on changes in internal and external experience and likely future experience. For Endowment option, special surrender value will be arrived at by multiplying PUV with SSV Factors. For whole life option, special surrender value will be arrived at by multiplying PUV with SSV factors and a rating up factor. No surrender value is available after the end of endowment term in case of whole life option.

- **Policy Loans**

In situations of emergency, you may require funds to meet some expenses. To fulfil this need, we allow you to borrow against your policy. Loans will be available after the policy acquires surrender value. The policy loan will be limited to a maximum of 90% of the surrender value.
